PROFESSIONAL SUMMARY

Data Analyst Intern and Artificial Intelligence Engineering student specializing in web analytics, A/B testing, and data automation. Owns end-to-end experimentation from tracking design through live GA4 analysis with a track record of double-digit conversion lifts, fast root-cause diagnosis of funnel issues, and building self-serve tools that cut manual reporting time.

EXPERIENCE

Data Analyst Intern | The Sleep Company

March 2026 – August 2026

- A/B Testing Ownership:** Owned the full testing lifecycle for 4 collection pages (mattress, sofa, desk, chair) — writing tracking specs, configuring 15+ GTM tags/triggers, QA-validating events, and analyzing results in GA4; one test lifted average session duration by **128%** and cut bounce rate by **36%**.
- Experimentation at Scale:** Led 8+ A/B tests across homepage, PDPs, and popups using CustomFit and GA4, driving a **94% increase in store-visit conversion**, a **23% lift in add-to-cart submissions**, and a **56% CTR improvement** on a CTA redesign tested across 495K+ users.
- Root-Cause Diagnosis:** Investigated a sudden Add-to-Cart drop by isolating the affected product via funnel analysis, tracing it to a newly added pincode-verification step, enabling a revert within days and recovering lost conversions.
- Automation & QA:** Built an automated Excel anomaly-detection dashboard using 14-day rolling averages to monitor 300+ website events, flagging performance deltas beyond $\pm 50\%$; automated a recurring QA task with Google Apps Script, **saving ~30 minutes weekly**.
- Reporting & Enablement:** Developed self-serve Looker Studio dashboards for Brand and Marketing teams, eliminating recurring ad-hoc data requests, and maintained daily reporting on Google Ads and lead/purchase event health.
- Cross-Functional Delivery:** Managed **50+ Jira tickets** spanning tracking, QA, and bug fixes in collaboration with developers, QA, and product managers — closing **40+ to date**.

TECHNICAL SKILLS

Programming & AI: Python, SQL, Generative AI Integration

Web Analytics & Tracking: Google Tag Manager (GTM), Google Analytics 4 (GA4), CustomFit (A/B Testing), CustomerLabs (CDP)

Data Analysis & BI: Power BI, Excel, Looker Studio

Tools & Frameworks: Jira (Agile/Project Tracking), Google Apps Script, Jupyter Notebook, GitHub, pgAdmin, VS Code

PROJECTS

AI-Powered Document Intelligence & Data Extraction Suite

July 2025

Technologies: Python, Gemini API, Streamlit

- Architected a full-stack Streamlit application using Python and the Gemini API to automate data extraction from physical invoices and challans, reducing manual data entry time by an estimated 80%.
- Integrated multi-modal OCR with dynamic extraction schemas (Date, Quantity, Total Amount) from unstructured PDF/image inputs, plus an editable validation grid exporting to Excel, CSV, and PDF.

B2B CRM Sales Pipeline Analysis

December 2025

Technologies: PostgreSQL

- Standardized a CRM dataset of **8,800+** records, resolving naming inconsistencies (e.g., 'GTXPro' vs 'GTX Pro') to ensure 100% accuracy in multi-table revenue joins.
- Developed analytical models using CTEs and window functions (LAG) to track QoQ revenue momentum, identifying a **171%** growth spike in Q2, and built a sales-velocity model that identified the top-performing manager at a **52.07%** win rate.

EDUCATION

Bachelor of Engineering in Artificial Intelligence

September 2024 – May 2027

Universal College of Engineering, Mumbai, Maharashtra

Diploma in Computer Engineering

August 2021 – June 2024

Pravin Patil College of Engineering and Polytechnic

CERTIFICATION

Tata - Data Visualisation: Empowering Business with Effective Insights Job Simulation – Forage

SQL (Intermediate) – HackerRank
